- Factor the polynomial: $x^3 - 3x^2 - 4x + 12$.
- Simplify: $\frac{\sqrt{50x^4}}{5x^2}$.
- Solve the exponential equation: $3^{2x} = 81$.
- Find the vertex and axis of symmetry of the parabola $y = -x^2 + 4x - 1$.
- Solve for x : $\log_2(x + 3) = 4$.

Solutions:

- $x = 1 \pm \frac{\sqrt{3}}{2}$ (after applying quadratic formula)
- $(x - 3)(x + 1)^2$
- $\sqrt{2x^2} = x\sqrt{2}$
- $2x = 4 \Rightarrow x = 2$
- Vertex at $(2, 3)$, axis of symmetry $x = 2$

Question What are the key topics to review for the Algebra 2 spring semester exam? Key topics include quadratic functions, polynomial operations, rational expressions, exponential and logarithmic functions, systems of equations, and sequences and series. **Answer** How do I solve quadratic equations by factoring? To solve quadratic equations by factoring, set the equation equal to zero and factor it into binomials. Then, set each factor equal to zero and solve for the variable. What is the quadratic formula and when should I use it? The quadratic formula, $x = \frac{-b \pm \sqrt{b^2 - 4ac}}{2a}$, is used to find solutions of quadratic equations when factoring is difficult or impossible. How do I simplify rational expressions? To simplify rational expressions, factor numerator and denominator completely, then cancel common factors. Ensure the denominator does not equal zero. What is the difference between exponential growth and decay? Exponential growth occurs when the function increases over time, modeled as $y = a(1 + r)^t$, while exponential decay decreases over time, modeled as $y = a(1 - r)^t$, where r is the rate. How do I solve systems of equations graphically and algebraically? Graphically, plot both equations and find the point of intersection. Algebraically, use substitution or elimination methods to find the solution set. What are sequences and how do I find the n th term? Sequences are ordered lists of numbers. To find the n th term, identify the pattern and derive a formula that expresses the term in terms of n . How do I determine if a function is linear, quadratic, or exponential? Check the pattern of the graph and the degree of the polynomial. Linear functions have degree 1, quadratics degree 2, and exponentials involve variables in the exponent. What strategies can I use to prepare effectively for my Algebra 2 exam? Review all notes and homework, practice solving different types of problems, take practice exams, and focus on concepts you find most challenging. How can I improve my problem-solving speed for the Algebra 2 exam?

Practice consistently, learn to recognize problem types quickly, memorize key formulas, and develop efficient strategies for solving each type of problem.
